Social Connectedness and Social Isolation in Nursing Home Residents

The impact of social isolation on the health and well-being of nursing home residents needs to be better understood. This study will examine the extent to which social isolation occurs in nursing homes, how it impacts health and well-being, and what factors may reduce social isolation and increase social connectedness.

Antidementia medication use, safety, and effectiveness among nursing home residents with Alzheimer's disease.

For most nursing home residents with Alzheimer's disease, treatment with antidementia medication is recommended, but the majority of residents have not received treatment historically. This study will examine the use, safety, and effectiveness of antidementia medications for older nursing home residents with Alzheimer's disease.

Anticoagulant Use, Safety, and Effectiveness for Ischemic Stroke Prevention in Nursing Home Residents with Atrial Fibrillation

Many older adults living in nursing homes have atrial fibrillation, which causes certain types of strokes. For most nursing home residents with atrial fibrillation, anticoagulation is recommended, but as many as half do not receive treatment. This study will examine the use, safety, and effectiveness of anticoagulants for older nursing home residents with atrial fibrillation.
