(List of Mentees and accomplishments presented in a separate document).

DEI-related focus and activities: All my research studies include children and families from Black and Latino backgrounds and a focus on pediatric health disparities; specifically, improving health outcomes for minoritized groups. The conceptual models, protocol and recruitment and retention procedures are all tailored to address the needs and experiences of the populations we work with through the application of the NIMHD health disparities framework.

Mentoring activities in research and clinical supervision also include trainees and faculty from minoritized groups.

As part of my Vice Chair role in Pediatrics, as well as various training positions, I develop and lead faculty development and training seminars focused on DEI/AR issues in research and training.
