**ADDITIONAL INFORMATION**

PERSONAL STATEMENT

I am a social epidemiologist and mixed-methods researcher who leverages implementation science paradigms to strengthen delivery of health services to HIV-affected populations, from adolescents to people who sell sex and/or use drugs. My research interests are primarily situated in the application of quantitative and qualitative methods for evaluating harm reduction and sexual health interventions for people living with or at-risk of HIV, with attention to East and Southern Africa. Recently, my work has also sought to identify feasible and effective strategies for preventing overdose deaths and mitigating other harms associated with substance use, from authorization of safe consumption sites to implementation of fixed-location and mobile technologies (e.g., reverse-motion detectors, push-activated buttons) for timely overdose detection and response in the context of solitary drug use. I also use innovative quantitative approaches, including latent variable modeling and discrete choice experiments, to interrogate end-user and service preferences for HIV and substance use service delivery features, both in the United States and abroad. Currently, I serve as Principal Investigator of two implementation science-focused studies evaluating community-based models for HIV treatment delivery in Uganda and bathroom-based reverse-motion detectors for overdose detection and response in Boston homeless shelters. I received my MSPH and PhD from the Department of International Health at Johns Hopkins University Bloomberg School of Public Health. My research has been published in high-impact peer-reviewed journals including *Addiction*, *Clinical Infectious Diseases*, *Journal of the International AIDS Society*, and *Social Science & Medicine*. In 2023, I joined the editorial boards of *BMC Public Health* and *PLoS One*.
