Brown/Moi Training Program for the Prevention of HIV related Cervical Cancer

The focus of this proposed research training program is on HIV and cervical cancer. A multidisciplinary group of researchers will be trained to conduct HIV and HPV research with the end goal of decreasing cervical cancer related deaths among HIV infected women in Kenya. We propose to train 6 long term trainees in graduate studies (2PhD, 3 Master's students); 8 medium term trainees (3-6 months) for MDs, nurses, cytotechnologists, data managers, pharmacist; and conduct 5 short term symposiums and workshops in these priority areas over the next 5 years.

Cervical Cancer Screening in Bangladesh

The objectives of the project are: Initiate an educational campaign on HPV infection and cervical cancer prevention by **(1)** Implementing and expanding the training of health care providers (including nurses, midwives and doctors) on cervical cancer screening, diagnosis and treatment in accordance with the National Strategy for Cervical Cancer Prevention and Control program, **(2)** Implement an effective and organized cervical cancer screening and treatment program using a single visit "see and treat" model (VIA with mobile ODT/thermocoagulation) (iii) and appropriate referral for more advanced lesions, and **(3)** Provide quality assurance monitoring, data management and evaluation systems.

Reproductive Hormones and Their Impact on HIV-1 Acquisition

The aims of this projects are: (Aim 1) To quantify the effect of exogenous and endogenous reproductive hormones on HIV-1 susceptibility of the reproductive tract, (Aim 2) To determine whether reproductive hormones alter the mechanisms responsible for HIV-1 transmission through cervicovaginal epithelia, (Aim 3) To quantify the effect of reproductive hormones on HIV-1 dependency factors in the female genital tract. We will assemble a longitudinal cohort of healthy pre- and post-menopausal HIV-1 uninfected women.

Role: Co-investigator
The major goals of this project are 1) to evaluate the safety and establish doses of LT that can be administered in the rectum and vagina of women, and 2) to test the adjuvanticity of LT at these sites by evaluating immune responses induced in groups of women who receive rectal and vaginal immunizations with antigen or antigen plus LT.

NIDA
Effect of Directly Observed Antiretroviral Therapy on Plasma and Cervicovaginal HIV-1 RNA
Role: Principal Investigator
Levels Among HIV-Infected Substance Abusing Women: Principal Investigator
The aim of the project was to determine the feasibility of using DOT among substance abusing women to decrease plasma and genital tract viral load.

U64/CCU106795 (Carpenter) 10/01/1991 - 09/29/2000
HIV Epidemiology Research Study (HERS)
Centers for Disease Control and Prevention
Role: Co-investigator
The HERS was a longitudinal study to determine the natural history of HIV infection among US women.

HERS Sub study (Cu-Uvin) 04/01/1998 - 12/31/2000
CDC
Peripheral and Mucosal Immune Reconstitution After Highly Active Antiretroviral Therapy in HIV-Positive Women
Role: Co-investigator
The substudy was to assess mucosal immune reconstitution among women starting highly active antiretroviral therapy.

RO1 HD33215 (Mayer) 05/01/1995 - 04/30/1998
NICHD
Cervicovaginal Inflammation and Infection and HIV Load
Role: Co-investigator
The aim of the study was to assess the effect of cervicovaginal inflammation on HIV shedding in the female genital tract.

RO1 A135543 (Flanigan) 11/01/1993 - 10/31/1997
NIH-NIAID
Induction of Anti-HIV Ig A in Rectum and Cervix of Women
Role: Co-investigator
The study evaluated the induction of immune responses in the rectum and vagina using cholera toxin.
